

MICHAEL ANI

Stone Mountain, GA 30083

✉ mikeani482@gmail.com  LinkedIn  My Website

Education

Georgia Institute of Technology

Masters in Analytics

Jan. 2025 – Present

Atlanta, GA

Georgia Institute of Technology

B.S. Mathematics and Computer Science

Jul. 2020 – May. 2024

Atlanta, GA

Skills

Languages & Libraries – Python, Java, Scala, JavaScript, SQL, R, C++, C#, Haskell

GenAI & ML Frameworks – HuggingFace, LangChain, DSPy, PyTorch, TensorFlow, Keras, scikit-learn, Spark MLlib, Pandas, NumPy

LLMOps & Deployment – RAG Pipelines, Text2SQL, Multi-Agent Systems, Reinforcement Learning, Fine-tuning, Evaluation Pipelines

Distributed & Scalable Systems – Apache Spark, Kafka, Hadoop, Kubernetes, Docker

Cloud Platforms – AWS, Azure, GCP

Collaboration & Tools – Git, Visual Studio Code, Agile, Scrum, Customer-Facing Demos

Experience

VISA

Software Engineer

April 2026 – Present

Austin, TX

- Engineered a secure authentication application integrating the full 3DS Authentication pipeline within Risk and Identity Solutions to enhance fraud prevention and transactional security.
- Developed and evaluated Retrieval-Augmented Generation (RAG) models, performing advanced context optimization to improve data retrieval precision and AI-driven decision-making.
- Leveraged Agentic Toolchains, Bruno, and Postman for seamless API testing, workflow automation, and reliable system integration.

Northside Hospital

Software/Data Engineer

September 2024 – March 2026

Atlanta, GA

- Led the development of a GenAI-driven patient matching system using HuggingFace transformers and LangChain to resolve duplicate records across departments.
- Collaborated cross-functionally with data and medical teams to evaluate, tune, and deploy LLM-backed tools using PyTorch and Spark for scalability.
- Developed deployment-ready AI pipelines on AWS using Docker, Kubernetes, and real-time metrics tracking for feedback and LLMOps retraining.

Amdocs

Software Engineer

June 2023 - August 2023

Atlanta, GA

- Collaborated directly with product and design teams to create interactive GenAI voice assistants for customer support, using multi-agent coordination strategies.
- Integrated fine-tuned LLMs into customer domains using LangChain and vector search; presented prototypes to internal and client stakeholders.
- Contributed to Databricks-backed data pipelines by optimizing Spark jobs for customer insights and NLP model fine-tuning.

Projects

Website Portfolio | *React, Node.js, AWS, LangChain, HuggingFace*

Summer 2024

- Built a fullstack web app with GenAI chatbot using LangChain, HuggingFace models, and instruction-tuned pipelines; deployed on AWS with Docker.
- Integrated evaluation loop with DSPy to iteratively improve chatbot reasoning quality via user feedback and example-guided tuning.
- Monitored LLM performance and retrained key components using real-time logs and prompt-based evaluations.

4210 Final Project – Image Recognition | *Python, PyTorch, Spark, Azure*

Fall 2023

- Built distributed image classifier on Azure using PyTorch and Apache Spark, handling 200,000+ facial images across compute nodes.
- Performed evaluation and post-training calibration using scikit-learn and Spark MLlib.
- Delivered end-of-semester presentation on ML deployment strategies and real-world risk mitigation using explainability techniques.
